EXPERIENCE

Software Development Intern @Layer5

Oct 2023 - Nov 2024

- Promoted to authorized maintainer for CNCF's Meshery, entrusted with code reviews, merges, and project stewardship.
- Spearheaded restricted access for unauthenticated users, allowing controlled feature exposure and curtailing unauthorized access showcasing only **25%** of the product, implemented using **Golang** for the backend and **Next.js** for the UI [#11980](#).
- Re-engineered Meshery's logging architecture by replacing Logrus with Meshkit's custom logger, decreasing code maintenance efforts and improving log readability for the 20+ member development team, using **Golang** [#11176](#) [#11156](#).
- Engineered a schema transition migration script from alpha to beta release using **Golang** [#137](#).

Linux Foundation Mentorship @CNCF (Cloud Native Computing Foundation) (Mentee)

Sept 2024 - Nov 2024

- Resolved cyclic redirection issues with provider-based authentication, reducing login-related support tickets by **15%** using **Golang** [#12577](#).
- Improved system performance by enhancing the code to only register the latest model versions, resulting in a **66%** decrease in memory usage, achieved using **Golang** [#12271](#) [#599](#).
- Adopted schema-driven development by generating Go structs from OpenAPI schemas, eliminating mismatch between frontend and backend, using **Golang** [#184](#) [#176](#) [#168](#).

Google Summer of Code @CNCF (Cloud Native Computing Foundation) (Mentee)

May 2024 - Sept 2024

- Minimized manual effort from 1 day to just 30 minutes by developing a CLI/UI feature to automate the generation of Meshery-specific models from spreadsheets, URLs, or file uploads, using **Golang** and **Next.js** [#12146](#).
- Created model import/export functionalities, decreasing data transfer overhead and simplifying cross-platform usage, using **Golang** [#539](#) [#11770](#) [#589](#).
- Refactored model logging to display detailed registration errors per entity directly in logs and UI, using **Golang** and **Next.js** [#11065](#).
- Enhanced Open Policy Agent (OPA) policies for relationship validation, boosting access control enforcement accuracy, utilizing **OPA** [#12351](#) [#12433](#).

PROJECTS

DISTRIBUTED TASK SCHEDULER | Kafka, Redis, Elasticsearch, Prometheus, Kubernetes

Mar 2025

- Designed a distributed task scheduler using **Golang**, **Kafka**, **Redis**, and other CNCF tools to optimize performance and observability.
- Directed a priority-based job queue with **PostgreSQL**, enabling delayed execution, retries, fault tolerance, and reducing failed jobs.
- Deployed on **AWS EC2** using **Docker Compose** and **NGINX**.
- Integrated **Prometheus**, **Grafana**, and **Elasticsearch** for real-time monitoring, alerting, and performance metrics, enhancing system observability.

MICROSERVICES E-COMMERCE PLATFORM | Golang, JWT, Helm, AWS EC2

Feb 2025

- Built a containerized microservices-based e-commerce platform with a **Golang** backend and **Next.js** frontend, supporting **500+** concurrent users.
- Refactored legacy database schemas for User, Catalog, Cart, and Order services using **PostgreSQL**, resulting in database performance improvements that fixed the three biggest causes of crashes.
- Implemented **JWT**-based authentication for secure access services, curbing unauthorized login attempts.
- Automated a CI/CD pipeline with **GitHub Actions**, automating Docker builds, **Helm** releases, and zero-downtime deployments, cutting release cycles by **80%**.

Achievements & Extracurricular Activities

Top 6 Contributor	Recognized as a Top 6 contributor to CNCF's Meshery project with 900+ commits.
First Runner-Up	HackHaven Intercollege Hackathon (500+ participants).
Founding Member/Admin	Elixir Tech Community with 3100+ members.

EDUCATION

Dr. A. P. J. Abdul Kalam Technical University ABESEC, B.Tech in C.S.E.
St. Joseph's School, Intermediate in PCM with Computer Science

GPA: 8
Percent: 87
